

ROCCS

Reverse Osmosis Ceramic Conversion System

Dream Tree's ROCCS (Reverse Osmosis Ceramic Conversion System) is ideal for filtration of well water or a municipal water supply that contains heavy metals or other challenges that might require a more powerful purification solution.

For many years reverse osmosis (R/O) has been the most popular option to remove impurities from the water we drink. Dream Tree has taken the reverse osmosis process and perfected it by adding a series of filters after the R/O process. These filters take the dead, acidic water created through the R/O process and bring it back to life with our patented ceramic conversion process.

Premium Six Stage Filtration

The ROCCS is comprised of six stages of filtration for optimum purification. The system begins with a sediment filter to remove larger particles and is followed by two carbon filters and a membrane filter that completes the reverse osmosis process. The purified water is then treated further by a taste and odor filter and an antioxidant/alkaline filter to create water that makes you feel good!

The reverse osmosis portion of the Dream Tree ROCCS is among the most efficient and effective in the marketplace today, but the unique process we use to bring that water back to life separates the Dream Tree reverse osmosis system from all the rest. The ROCCS is designed to produce up to 50 gallons per day; it averages to approximately 1 gallon every 30 minutes.

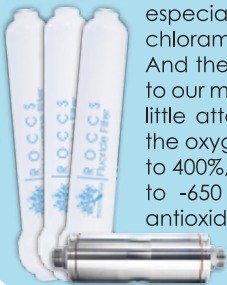

We're confident that every Dream Tree product you choose will have a major impact on your well being; the key is to provide the right kind of water for your family.

Please be advised that the ROCCS does require professional installation but maintaining the ROCCS unit is quite simple once it is installed and requires no special skills. Changing the filters is simple and we provide a suggested maintenance schedule so you'll always know when it's time to change each filter.

NEED A LITTLE EXTRA HELP?

Everyone has a different water quality. Some is okay—others, well, let's just say it needs all the help it can get. If your water needs a little TLC, we have a solution just for you.

We offer add-on filters if you are concerned about especially high levels of radiation, chloramine, or fluoride in your water. And the ROCCS can be connected to our medium Tornado unit. With this little attachment, you can increase the oxygenation of your water by up to 400%, decrease ORP levels to -250 to -650 (which means even more antioxidants), & create microcluster water molecules to hydrate even better.

Main Features of the ROCCS

- Converts your water to an alkaline pH of 9.0 to 9.5
- Changes ORP (antioxidant levels) to -150 to -350—that's better than the ORP of vitamin C, which has an ORP of -50! Normal tap water levels range from 200 to 500.
- Reduces TDP (Total Dissolved Solids) down to 20 to 50 from normal tap water levels of 300 to 600
- Capable of easily filtering up to 50 gallons a day for your home
- Removes up to 95% of chlorine, chloramine, & radiation in water
- Removes up to 99% of common toxic waterborne contaminants
- Adds essential minerals through our ceramic conversion process
- Connects to refrigerators & ice machines with in-line water hook-ups
- Can be installed under sinks, in crawl spaces, and in basements
- Great for cooking, beauty, plants, and all your water needs!
- Easily customized to fit your filtration needs
